Management Message

Thank you very much for your continued support of Japan Display Inc.

JDI has worked to strengthen corporate governance, restructure its financial base, and solidify new sources of profit. In FY2021, we will strive to innovate our existing businesses while at the same time cultivating new businesses. As reforms to existing businesses, JDI will strengthen sales and marketing and build organization and management systems with the responsible for succeeding in restructuring these existing businesses, as well as broaden product competitiveness through diverse technologies which fully enhance earning power and reorganize low-profit products and businesses. We will also cultivate new businesses by creating new business models and commercializing high-added-value products and businesses.

Although the negative effects of the novel coronavirus crisis on our current business operations are unavoidable, I view the change in the market as a new business opportunity and will guide management aiming for our company to coexist in a post-COVID-19 society.

Building a Sustainable Corporate Base

We are a display manufacturer with advanced technological capabilities, supplying to our customers globally displays for smartphones, automobiles, consumer products, and medical and industrial equipment. We are a global leader in automotive displays due to our high reliability and functionality and long track record of secure product delivery to our customers. Our Ultra High Definition displays for VR devices and low power consumption wearable device displays are other examples of products which consistently receive high customer acclaim.

We are leveraging the display technologies amassed in our businesses thus far in devices like sensors as well as solution services to develop and commercialize technologies and expand our reach into new fields. As means to this end, JDI added new purposes of business to the Articles of Incorporation through revisions made in June 2021.

My job as Chairman and CEO is to support all of our employees globally to make full use of our capabilities - human resources, technology, products, and financial resources. I will strongly advocate the creation of unparalleled technology for the development of game-changing products as well as devices and solutions which are able to provide unparalleled consumer value with the goal of achieving reform and becoming a personal tech company.1

Employee Health and New Work Style

The spread of the novel coronavirus has dramatically changed all of our work styles. To protect the health of employees, JDI utilized measures to limit contact, such as the introduction of telework (work-from-home) programs, recommendations for staggered work shifts, the configuration of socially distanced workspaces, restrictions on nonessential and nonurgent business trips, and the use of web conferencing systems.

In October 2020, we also upgraded our employment structure to a hybrid work system integrating both on-site and telework as a permanent work-style reform for general office employees in anticipation of a post-corona society. These reforms to conventional work styles assume employees work on-site, the promotion of flexible work styles which do not rely on time or place, and initiatives to limit long working hours aim to both improve work productivity and enhance the quality of life.

Toward Realizing a Virtuous Cycle of Environmental Protection and Growth

JDI is continuously improving its environmental activities, paying more attention to the relationship between its business plan and management, as well as its strategic directions, which are in accord with the Environmental Management System Standard, ISO 14001 (2015 version). We are also promoting ongoing improvements by incorporating responses to survey items by a third-party assessment institution (CDP), etc.

Using the CDP company questionnaire, JDI will start calculating greenhouse gas emissions (Scope 3) throughout the entire supply chain while also continuing efforts in two fields—climate change and water security.

As the foundation of business operations, we comply with laws and regulations and respond to demands from customers and various other stakeholders regarding environmental issues. We strive to prevent production- or product-related incidents. In product-related areas, we have established and implemented development processes aimed at providing products that meet environmental requirements, such as the management of chemical substances contained in our products and the design of environmentally conscious products, and are working to meet various regulations and customer requirements.

This illustrates how extremely important environmental initiatives are for our company. We will put forth the environmental policies shared across our group, strive to achieve environmental goals for key topics and strengthen our initiatives aimed at environmental issues, work to decrease the environmental load, and to improve our corporate value will push forward with both business activities and environmental activities.

Toward Sustainability and Decarbonization

In recent years, the SDGs adopted by the United Nations, the international Paris Agreement on climate change, and other international objectives and rules are also accelerating. We will organize the SDGs as specific targets in order to help realize each of these goals while furthering future business ventures. JDI will then actively use these targets as an index measuring the social value generated by our businesses. We must also actively address social issues. JDI participated in the United Nations Global Compact (UNGC), which drafted the ten principles on human rights, labor, environment, and anti-corruption in August 2021 as well as joined the Global Compact Network Japan (UNGC) made up of Japanese companies and other organizations which have signed the UNGC. As a good member of society, JDI will take action to contribute to a sustainable society.

In October 2020, Japan announced its goal to become carbon neutrality by 2050. In April 2021, the government went on to announce a much more aggressive goal to reduce greenhouse gas emissions by increasing the target from 26% to 46% by fiscal 2050. JDI will take on the challenge of reducing greenhouse gases as a critical medium- to long-term issue toward the realization of a decarbonized society.

Corporate Governance and Sound Business Base

JDI disclosed the lack of an effective internal control system related to financial reporting due to inappropriate accounting practices in the past. However, as a result of launching a Governance Enhancement Committee, strengthening internal controls via reforms and other measures put in place, according to Committee debate, we have resolved all material weaknesses as of the fiscal year ended March 31, 2021. JDI will not only continue to execute initiatives undertaken thus far to prevent any recurrence of similar issues and management emphasizing stronger corporate compliance, but also improve internal communication to further strengthen internal controls, regain the trust of each and every stakeholder, and maximize corporate value.

We will always respect the human rights of our employees and contribute to local communities and society at large through our businesses and various other activities, while building a sound business foundation which can foster future growth in the hope of becoming a company trusted by society.

We appreciate your continuing support.

Chairman, CEO, & A Representative Executive Officer

Scott Callon

---

*1 Our vision is to become a company that offers technologies and services that consider people’s needs and enrich daily lives through not only the display business, but also through expanding into healthcare, security, and other new fields of business.
Providing the Social Values that JDI Aims For

“With fresh perspectives and advancing technologies, we work constantly to realize a world that is inspiring and free of stress.”

Based on this corporate philosophy, JDI will help realize a convenient, safe, secure, sustainable, and comfortable society by providing products and services that connect people and things to the society.

JDI’s Interface Technology is Being Utilized in Various Fields

The small- and medium-sized displays from Japan Display are installed in many products in a wide range of fields, such as smartphones, in-vehicle devices, medical devices, digital cameras, wearable devices, and VR (virtual reality) devices. LTPS (low temperature poly silicon) TFT technology, which is the basic technology of our products, will be further enhanced and deepened to enhance its competitiveness. At the same time, we aim to grow our business with OLED displays, which offer excellent definition, power consumption, and manufacturability. At the same time, the application of next-generation sensors and solution services beyond displays founded in the technologies amassed over many years as well as the development of new business domains is advancing JDI’s commercialization of high-added-value technologies as a personal tech company creating unparalleled consumer value.

With these input and output interface technologies, we will provide comfort, safety, security, and convenience to people around the world for 5th generation mobile communication systems (5G) and Beyond 5G. We will simultaneously aim to help create a sustainable society through technologies and services designed to realize both sound economic conditions and a decarbonized society.
Our corporate philosophy which aims to work constantly to realize a world that is inspiring and free of stress with fresh perspectives and advancing technologies coincides with the objectives of the SDGs to realize a sustainable society. Therein, JDI examined and extracted the most relevant of the 17 goals and 169 targets which embody the SDGs for each item illustrating the form in which JDI initiatives should broadly contribute to the SDGs (figure below).

In the future, we will set targets ideal for our businesses and actively strive to use these targets as an index measuring the social value generated by those businesses.
CSR Management/Governance

CSR Management

We act in accordance with our behavioral guidelines for the realization of our corporate philosophy and vision, and work to solve social issues and create social value.

Our Purpose

With fresh perspectives and advancing technologies, we work constantly to realize a world that is inspiring and free of stress.

Our Vision

We shape our future with every movement we make. We create multisensory realities that transform into extraordinary moments you can see, hear, touch, smell, and taste.

Our Behaviors

● We welcome challenge, and always bring customer tasks to completion.
● We move quickly with unconventional ideas, and strive to exceed expectations.
● We adapt to, enjoy, and drive positive change.

Approach to CSR (=CSR Basic Policy)

For the purpose of not only complying with laws and regulations but also implementing management in compliance with corporate ethics, JDI has established “JDI Ethics” which serve as specific guiding principles for all officers and employees to comply with. JDI Ethics are the foundation of our CSR activities.

JDI Ethics define our basic stance for our relationship to society including the local community, realizing efficient and free of stress.

Organizations and Structures for CSR

JDI’s CSR activities are being promoted under the umbrella of “Five Area-Specific Activity Systems” which widely cover the ISO 26000 core subjects.

Relationships with Our Stakeholders

Our business activities are based on relationships with various stakeholders. We consider our major stakeholders to be our customers, business partners, employees, shareholders/investors, and local communities. JDI believes that it is important to establish mutual understanding and trustful relationships with our stakeholders in order to continue and develop its business.

Customers
We communicate closely with our customers and share our business results and business activity information with them.

Business Partners
We hold supplier meetings and ask for their cooperation in our business efforts.

Employees
We share our business results and business activity information with our employees.

Shareholders/Investors
We hold briefing sessions for analysts and financial institutions to explain about our corporate performance and communicate with them.

Local Communities
We communicate with local communities through social contribution activities, etc.
Corporate Governance

Our company believes that enhancing corporate governance will lead to improved corporate soundness, transparency, and corporate value. We are building a system and developing various systems based on the principles of Japan’s Corporate Governance Code established by the Tokyo Stock Exchange.

### Basic Policy View

1. Japan Display Inc. (hereafter “the Company”) strives to achieve the goals of sustainable growth and increasing corporate value to the medium to long term by practicing important corporate principles. In order to achieve these goals the Company has established a “Corporate Governance Basic Policy” that contains its basic view of corporate governance as well as a framework and set of policies based on its view of corporate governance.

2. In order to have a transparent, fair, rapid and decisive decision-making process that serves the interests of shareholders, customers, employees and local communities, the Company is continuously committed to further strengthening its Corporate Governance in accordance with the fundamental concepts listed below.

#### Eight Risk Categories

- Natural disaster and accident risks
- Legal (litigation) risks
- Financial risks
- Economic risks
- Labor risks
- Political risks
- Social risks
- Business activity risks

### Corporate Governance System

JDJ is a company with a Three Committees governance structure as set forth in the Companies Act of Japan. Under this structure, the functions of management supervision and business execution are separated in order to establish an operating system that enables the swift conduct of business and ensures the effectiveness of management supervision. The Board of Directors, which is comprised of a majority of outside directors, performs highly effective supervision of the management of the Company by utilizing a Nomination Committee, a Compensation Committee and an Audit Committee, and is also responsible for creating and maintaining a highly effective system of management supervision that is robust and transparent. The Board of Directors decides on basic management policies and other important matters, and delegates the authority to execute business in regard to matters other than those stipulated by laws and regulations, the Articles of Incorporation and the rules of the Board of Directors to Executive Officers, after clarifying the scope of their responsibilities.

### Internal Control System

The JDI Group has identified eight risk categories, namely, natural disaster and accident risks, legal litigation risks, financial risks, economic risks, labor risks, political risks, social risks, and business activity risks, and has tasked each department of the Group to perform assessments of assumed risks in regard to their probability of occurrence and their impact if they were to occur, study and formulate countermeasures for risks which are above normal levels of concern, and implement countermeasures within the department following a Group management review. Each year the JDI Group reviews the list and content of risk assessment (setting of the degree of significance). In addition, the Group has established the necessary rules and systems to prevent risks and minimize the effects in cases of occurrence.

### Compliance

In accordance with the Fundamental Policy for Compliance, the Company has established the Compliance Committee as a forum where representatives from related units deliberate and implement measures to establish and inculcate compliance promotion systems and programs. A compliance administrator is assigned to each division to ensure awareness of compliance measures among the employees of each division. The Compliance Committee is supervised by the chairperson appointed by the Board of Directors and consists of the representatives of divisions that prepare compliance-related policies and measures. The Committee meets once every half-year and holds extraordinary meetings as necessary. Furthermore, the Meeting of Compliance Administrators is held, which is a venue for deepening understanding of the results of deliberations by the Compliance Committee and for information sharing among compliance administrators.

### Risk Management System

In general, risk factors are detected and understood through information-sharing, and reporting during daily execution of business, and the implementation status of measures is minimized. The Company has in place a number of systems that promote comprehensive management of corporate risks, as well as the analysis and management of business activities.

### General Meeting of Shareholders

In accordance with the Fundamental Policy on the Internal Control System (Basic Policy on the Internal Control System) was completed in June 2012. Since then the Basic Policy and the Internal Control System have been in use but with partial modifications based on legal revisions and organizational changes.
Together with Our Employees

We aim to develop new businesses that “transcend the boundaries of displays.” In order to do so, we must challenge our technological capabilities to produce new items that create a better future with completely different ideas that move beyond displays. In order to continue contributing to the realization of a prosperous society, we are working on strategic and systematic human resource development.

Corporate Human Resource Development

Human Resource Development System

We have established the Human Resource Development Committee, a committee that coordinates human resource development for the entire company with the purpose of promoting developing the capabilities abilities of each employee by providing education and training systematically and effectively. Under the Human Resource Development Committee, we have established specialized subcommittees for each specialized field in order to build and work on our own educational program. The training areas are categorized into categories such as specialized fields, including rank/selection, global, compliance, and provide training opportunities according to the career and growth stages of each employee.

- Qualification Acquisition Incentive Program
  We support the acquisition of qualifications defined by the company and the Human Resource Development Committee/specialized subcommittees for the purpose of improving employee capabilities and promoting self-development.
  - Newly Added Qualifications (excerpts):
    - G Test (General)
    - E Certificate (Engineer)
    - Various certification organizations
    - Reliability Center for Electronic Components of Japan
    - Information-technology Promotion Agency, Japan (IPA)
    - Japan Statistical Society

- Degree Acquisition Support System
  We aim to develop human resources who can discuss and co-create with customer and supplier researchers on an equal footing, as well as highly specialized professionals who are effective in our business and management.
  - New Doctoral Degree Students
    - From 2020 to 2021
    - 2019: 4
    - 2020: 1
    - 2021: 2

Employee Career Development Support

Based on the idea that the growth of each individual employee leads to the growth of the company, we support the growth of employees by providing career development support for employees from various angles.

- Objective Management
  We are implementing objective management at the individual level to improve communication with superiors, support employee capability development, and improve business execution.

- Career Review System
  We have a system where employees themselves report once a year about self-awareness, future hopes, satisfaction, and other career related matters, deepening the culture of thinking together about the future of our employees.

Self-development Program

We provide various self-development programs in order to actively support all employees so that they have educational opportunities and are always willing to learn. In addition to self-teaching and supporting employees in acquiring 160 different types of certifications, JD1 has also incorporated a wide-range of programs in FY2021 to support the development of global human resources by subsidizing some of the costs for online English language classes. We launched a comprehensive academic degree support system in FY2018, and, starting in FY2020, we have been expanding the scope of support to professional degrees (MBA/OMT, etc.) and working to create highly specialized human resources who can play an active role both inside and outside the company.

- Qualification Acquisition Incentive Program
  We support the acquisition of qualifications defined by the company and the Human Resource Development Committee/specialized subcommittees for the purpose of improving employee capabilities and promoting self-development.
  - Newly Added Qualifications (excerpts):
    - G Test (General)
    - E Certificate (Engineer)
    - Various certification organizations
    - Reliability Center for Electronic Components of Japan
    - Information-technology Promotion Agency, Japan (IPA)
    - Japan Statistical Society

- Degree Acquisition Support System
  We aim to develop human resources who can discuss and co-create with customer and supplier researchers on an equal footing, as well as highly specialized professionals who are effective in our business and management.
  - New Doctoral Degree Students
    - From 2020 to 2021
    - 2019: 4
    - 2020: 1
    - 2021: 2

Respecting Human Rights and Diversity

Based on JD1 Ethics, while respecting the human rights of each employee as well as diversity in every situation including recruitment and treatment, we promote the creation of a comfortable work environment that protects the health of employees. We are also working to reform work styles with the aim of facilitating a variety of work styles while ensuring fair, flexible treatment and evaluations so that diverse human resources can reach their full potential.

Work-Life Balance and Work-At-Home System

Employees can continue to work while caring for elderly relatives, raising their children, and while receiving medical treatment.

Joyful Holiday Program

We encourage employees to refresh themselves and recommend a work style that clearly separates work and private life (annual leave acquisition promotion program).

Hourly Annual Leave Program

We are realizing diverse and flexible work styles by improving work-life balance and productivity of employees.
Together with Our Customers and Society

We aim to ensure that all departments involved in our product planning, design, manufacturing, sales, and service understand what customers need, and provide products and services that satisfy their needs.

Quality Policy

1. To provide satisfying quality to customers in accordance with our corporate philosophy.
2. To be responsible for our quality, act with speed and honesty, and make further improvements.
3. To be compliant to requirements and continually improve the quality management system.

Quality Assurance

In order to provide our customers with trouble free, reliable products and services based on our Quality Policy, we have established a quality management system. All departments involved in planning, design, manufacturing, sales, and service cooperate with each other as we promote quality assurance activities.

In our quality management system, the PDCA (Plan, Do, Check, Action) cycle is implemented and continuously improved, and not only our company but also many of our business partners cooperate in quality management efforts to ensure product quality. We have also enhanced our customer support system so that customers can use our products with peace of mind. Customer feedback is always focused on and analyzed in order to make further improvement.

Acquisition of ISO 9001 and IATF 16949 certifications

To deliver products satisfying the needs of customers, JDI’s design, development, production, and other relevant activities fulfill customer requirements in accordance with laws and regulations. We have built and continually enhance a quality management system suitable for our products and organization to ensure the proper execution of these tasks. JDI has acquired the ISO 9001:2015 at all Group companies engaged in the design, development and production of liquid crystal displays. Six sites manufacturing in-vehicle displays and other related sites engaged in design, development and other related tasks have also acquired the IATF 16949:2016.

Quality assurance during product development and quality management and assurance during mass production

In product development, we examine the functionality and reliability necessary to fulfill customer requirements before transitioning to mass production. In mass production, we monitor the quality of components and production processes to ensure that products meet the required standards.
Relationship with Society

Safety and Health

JDI and its Group companies not only work to ensure safe, comfortable work environments through initiatives prioritizing safety and health above all else in every business activity but also continually engage in efforts to realize a safe and comfortable society.

### Safety and Health Activities

#### Basic Safety and Health Policy

The Japan Display Inc. Group will, in all business activities, operate to ensure a safe and pleasant workplace environment through efforts to prioritize the assurance of safety and health, so as to continue contributing to the realization of a secure and comfortable society.

1. We will recognize the importance of occupational health and safety in our corporate social responsibility (CSR) and promote company-wide activities.
2. We will promote initiatives based on compliance and continuous improvement as company-wide safety and health activities.
3. We will promote initiatives aimed at eliminating occupational accidents, eradicating occupational diseases, and maintaining and promoting physical and mental health.
4. We will provide leadership in the establishment, operation, and improvement of occupational health and safety management systems (in compliance with the ISO45001), and will allocate and support management resources, including the necessary personnel, materials, and financial resources.

#### 2020 Occupational Accident and Health Results

In 2020, JDI encountered seven occupational accidents—six including contractor accidents in Japan and one at an overseas manufacturing site. On the sites where an occupational accident happened, we immediately sought out the cause and took action, while at the same time striving to share information across the Group to prevent any recurrence.

#### No More Occupational Accidents Month

JDI launched the Zero Occupational Accidents Month as a unique effort coinciding with the annual National Safety Week held throughout Japan. This initiative reflects on past occupational accidents, identifies risks in the workplace, and takes preventative action to eradicate potential dangers as an effort advocating safety every July.

#### Chemical Liquid and Gas Leakage Drills and Safety Sensory Education

The use of chemical liquids and gases is an essential part of JDI’s product manufacturing. These chemicals can be used safely by adhering to proper handling and management procedures, but any unforeseen trouble could lead to a major disaster. As a contingency against such an incident, JDI regularly conducts drills for responding to chemical liquid and gas leaks on sites using these types of chemicals. We also provide sensory education about these chemical liquids and gases to provide an even deeper understanding about their dangers.

#### Comprehensive Earthquake Evacuation Drills

JDI carries out comprehensive earthquake evacuation drills addressing the risks of a building collapse and fires caused by a large-scale earthquake at every site and office annually. In light of the novel coronavirus crisis in FY2020, we innovated this drill taking care to avoid closed spaces, crowded places, and close-contact settings, such as the use of a video outlining how to confirm evacuation routes and respond to a large-scale earthquake. We will also continue to hold initial fire-fighting drills in case of fires as well as other training drills to minimize damage in an emergency.

### Measures to Prevent the Spread of the Novel Coronavirus Infection

JDI is taking action during the rapid spread of the coronavirus infection in Japan by establishing a telework system while advocating every department in which employees could work from home as much as possible.

On manufacturing lines and in other departments where employees need to work on-site, we focus on measures to prevent the spread of the viral infection. Some specific efforts include distributing disaster prevention supplies to cities where masks are difficult to find as well as revising and dramatically increasing locations for hand sanitizing alcohol.

In addition, everyone is playing their part to prevent the spread of the virus. Employees take their temperature and monitor their health before coming to work. Reception desks help take the temperature and strictly enforce mask and hand sanitation rules when a visit is necessary as we drastically restrict the number of visitors coming to our office.

### Health Management Initiatives

#### Health Declaration

As a company which “work constantly to realize a world that is inspiring and free of stress with fresh perspectives and advancing technologies”, Japan Display group regards “Health” as a foundation for all business activities, support proactively employee’s health promotion, address an improvement of an active and pleasant working environment and contribute to realize a safe and comfortable society.

#### Purpose of Health Management

JDI has set a goal to support independent employee health management in an effort to enhance the work environment with the hope of fostering enthusiasm in each and every employee.

#### Health Management System

The health management system comes into play as a material sustainability issue by positioning health as the core foundation to all JDI business activities aiming to actively support the independent health promotion of our employees.

#### Health Promotion

“Improve” means to better oneself by acquiring knowledge and other skills in a way that illustrates enhanced value. Everyone who works at JDI has set three goals aiming to reduce health risks in the future in order to better themselves and their life.

- Improve 3

  - Improve 3
  - Improve 3

  - Improve 3

Value Chain and Social Contributions

We are committed to our environmental initiatives, which is not limited to our own activities but extended to the value chain of the entire product life cycle. In order to minimize the risks of the environmental pollution and the destruction of ecosystems, JDI continuously implements water quality management and air quality management efforts. Throughout the value chain of our products, from Raw materials procurement, Transport, Production, Use by customers and markets, until Final disposal, we engage in environmentally considerate business activities. In cooperation with our business partners, we implement thorough chemical substances management and use Eco-friendly materials. In response to the demands of customers and markets, we provide products and services that contribute to the reduction of environmental burdens, through means such as thin, light, and compact design and low power consumption.

JDI’s business activities

- **Efforts to prevent air pollution**: We operate smoke and soot emitting factories and volatile organic compound emitting facilities under the Air Pollution Control Law. Regular measurements and on-premise inspections by authorities in FY2020 found no exceeding of regulatory values for all measured items. We will continue to work toward management of atmospheric emission standards and improvement of related facilities.
- **Efforts to prevent water pollution**: In accordance with the Water Pollution Control Law, we have established voluntary standards that are more than 20% stricter than regulated values for water discharged into rivers and sewage systems for 15 items related to the living environment and 28 hazardous substances, which are agreed upon with local government agencies that have jurisdiction over each of our plants, and we conduct measurement control based on these standards. Regular measurements and on-premise inspections by authorities in FY2020 found no exceeding of regulatory values for all measured items. We will continue to work toward management of discharged water quality and improvement of related facilities.
- **Chemical substances management**: We control the use of chemical substances used in manufacturing and other processes, under internal rules categorized in accordance with legal regulations. We manage the use of chemical substances contained in products in accordance with the RoHS Directive, REACH, and other laws and regulations, as well as through green procurement. The same style of management is also used at global subsidiaries to prevent environmental contamination, respond to statutory requirements, and reduce the environmental load.
- **Proper disposal of wastes**: In our Environmental Policy, we approach to waste reduction and promote 3R’s (Reduce, Reuse, and Recycle) activities. Moreover, in accordance with the Waste Management and Public Cleansing Act, we separate specially-controlled industrial wastes, industrial wastes, and general wastes, and perform the risk management for each. We comply with the proper disposal of wastes and also work to reduce the risk of illegal dumping.
- **Noise and vibration management**: In accordance with the Noise Regulation Act, the Vibration Regulation Act, and other related regulations, we are operating the specified facilities (compressors, blowers, etc.). We perform measurements of noise and vibration at the boundaries of our plants grounds every year to confirm that these are within regulatory values. In FY2020, no items exceeded regulatory values.
- **Conservation of biodiversity**: In accordance with the Basic Act on Biodiversity, we work toward the conservation of ecosystems through greening activities at our plants and nature rehabilitation activities in surrounding areas. Within the area of our Mobara plant, an artificial “Hitaru-gawa” creek and a “Koi-pond” were setup. Furthermore, the Ishikawa plant is home to the Sizo-no-Mori forest.

Our Value Chain and Efforts to Minimize Environmental Risks

In order to minimize the risks of the environmental pollution and the destruction of ecosystems, JDI continually implements water quality management and air quality management efforts. Throughout the value chain of our products, from Raw materials procurement, Transport, Production, Use by customers and markets, until Final disposal, we engage in environmentally considerate business activities. In cooperation with our business partners, we implement thorough chemical substances management and use Eco-friendly materials. In response to the demands of customers and markets, we provide products and services that contribute to the reduction of environmental burdens, through means such as thin, light, and compact design and low power consumption.

JDI’s business activities

- **Efforts to prevent air pollution**: We operate smoke and soot emitting factories and volatile organic compound emitting facilities under the Air Pollution Control Law. Regular measurements and on-premise inspections by authorities in FY2020 found no exceeding of regulatory values for all measured items. We will continue to work toward management of atmospheric emission standards and improvement of related facilities.
- **Efforts to prevent water pollution**: In accordance with the Water Pollution Control Law, we have established voluntary standards that are more than 20% stricter than regulated values for water discharged into rivers and sewage systems for 15 items related to the living environment and 28 hazardous substances, which are agreed upon with local government agencies that have jurisdiction over each of our plants, and we conduct measurement control based on these standards. Regular measurements and on-premise inspections by authorities in FY2020 found no exceeding of regulatory values for all measured items. We will continue to work toward management of discharged water quality and improvement of related facilities.
- **Chemical substances management**: We control the use of chemical substances used in manufacturing and other processes, under internal rules categorized in accordance with legal regulations. We manage the use of chemical substances contained in products in accordance with the RoHS Directive, REACH, and other laws and regulations, as well as through green procurement. The same style of management is also used at global subsidiaries to prevent environmental contamination, respond to statutory requirements, and reduce the environmental load.
- **Proper disposal of wastes**: In our Environmental Policy, we approach to waste reduction and promote 3R’s (Reduce, Reuse, and Recycle) activities. Moreover, in accordance with the Waste Management and Public Cleansing Act, we separate specially-controlled industrial wastes, industrial wastes, and general wastes, and perform the risk management for each. We comply with the proper disposal of wastes and also work to reduce the risk of illegal dumping.
- **Noise and vibration management**: In accordance with the Noise Regulation Act, the Vibration Regulation Act, and other related regulations, we are operating the specified facilities (compressors, blowers, etc.). We perform measurements of noise and vibration at the boundaries of our plants grounds every year to confirm that these are within regulatory values. In FY2020, no items exceeded regulatory values.
- **Conservation of biodiversity**: In accordance with the Basic Act on Biodiversity, we work toward the conservation of ecosystems through greening activities at our plants and nature rehabilitation activities in surrounding areas. Within the area of our Mobara plant, an artificial “Hitaru-gawa” creek and a “Koi-pond” were setup. Furthermore, the Ishikawa plant is home to the Sizo-no-Mori forest.

Green Procurement Efforts

The entire JDI Group works to manage the chemical substances contained in its products so that it conforms to legal regulations such as the RoHS Directive and REACH Regulations, and is responsive to its customers’ demands. 1. Enactment of Green Procurement Guideline We enacted our Green Procurement Guideline to reflect both legal restrictions in various countries and regions on the chemicals contained in products and our customers’ demands. We ask our suppliers to comply with the guidelines. The Green Procurement Guidelines are reviewed annually and are disclosed on our website. We continuously comply with laws and regulations and make every effort to control chemical substances contained in our products.

2. Managing Suppliers’ Management Systems for the Chemical Substances in Products

We ask our suppliers to establish a management system for the chemical substances contained in raw materials and other procured items that follow the Guidelines for the Management of Chemical Substances in Products set by the Joint Article Management Promotion-consortium (JAMP). Using the system that links suppliers with JDI (Jamp Survey Site), we confirm whether a management system has been established. Suppliers that do not meet JDI’s standards are asked to correct and improve their management systems.

Social Contribution Activities

By establishing and complying with JDI Ethics regarding our relationship with society, we aim to be a company trusted by society as a “Good Corporate Citizen”. In addition to our business activities, we will continue to contribute to local communities and society through various activities.
Environmental Initiatives

Environmental Management Activities

We have established an environmental management system, and are working to make continuous improvements based on the activity plans determined by our Environmental Management Review and the environmental goals corresponding with our Environmental Initiatives. For FY2020, we implemented all activities as planned and achieved all environmental targets.

Environmental Policy

Recognizing that global environmental conservation is one of the most important challenges for humanity, Japan Display Inc. Group aim to be a company that respects people and the environment, and contributes to a sustainable society.

**Basic policy**

1. We will continually improve our environmental management system and, taking the life cycles of our display products into account, will work to reduce environmental burdens.
2. We will comply with domestic and overseas legal requirements and other voluntarily accepted requirements.
3. We will set environmental targets and other objectives concerning the following priority themes, and will promote activities for their achievement for their achievement in order to conserve the environment.

**Priority themes**

1. We will work to reduce the environmental burden of our business activities.
2. We will: 1-1) Promote global warming countermeasures, energy conservation, and the effective use of water; 1-2) Thoroughly manage chemical substances and promote their reduction and substitution; 1-3) Promote the 3Rs (Reduce, Reuse, Recycle) to address waste.
3. We will reduce the environmental burden of our products.
4. We will: 2-1) Promote the development of environmentally conscious products; 2-2) Thoroughly manage chemical substances contained in our products; 2-3) Promote green procurement.
5. We will work on activities for the conservation of biodiversity and environmental activities in local communities.

**Environmental Management System**

Japan Display Inc. (JDI) has established an environmental management system in Japan, with the Representative Executive Officer (CEO) as the Chief Executive of the Environment Management Officer and Environmental Promotion Officer, the Shinbashi and Ebina Offices, and manufacturing sites to promote continuous environmental management activities. The JDI Group’s global manufacturing sites, too, have set up environmental management systems to promote environmental activities. To secure the consistency of environmental activities across the JDI Group, we are making efforts to strengthen governance at our global manufacturing subsidiaries through means such as periodic liaison conferences.

### Environmental Management System

**Environmental Initiatives**

**Environmental Policy**

1. We will continually improve our environmental management system and, taking the life cycles of our display products into account, will work to reduce environmental burdens.
2. We will comply with domestic and overseas legal requirements and other voluntarily accepted requirements.
3. We will set environmental targets and other objectives concerning the following priority themes, and will promote activities for their achievement for their achievement in order to conserve the environment.

**Priority themes**

1. We will work to reduce the environmental burden of our business activities.
2. We will: 1-1) Promote global warming countermeasures, energy conservation, and the effective use of water; 1-2) Thoroughly manage chemical substances and promote their reduction and substitution; 1-3) Promote the 3Rs (Reduce, Reuse, Recycle) to address waste.
3. We will reduce the environmental burden of our products.
4. We will: 2-1) Promote the development of environmentally conscious products; 2-2) Thoroughly manage chemical substances contained in our products; 2-3) Promote green procurement.
5. We will work on activities for the conservation of biodiversity and environmental activities in local communities.

### Environmental Management System

**Coordination between the domestic management system and the global manufacturing subsidiaries**

[Diagram showing coordination between management review, promotion committees, etc., and local areas (Shibushii, Tohoku, Higashiura, Ishikawa, Mabora, Global Manufacturing Subsidiaries)]

### Environmental Initiatives

**Environmental Management Activities**

For FY2020, we implemented all activities as planned and achieved all environmental targets.
Environmental Initiatives

Energy Conservation Activities/Waste Management

In its Environmental Policy, JDI takes an approach to reduce (control generation), reuse, and recycle wastes, and is committed to a variety of activities.

JDI is especially committed to promoting energy conservation activities to realize a decarbonized society through improving energy efficiency and reducing greenhouse gas emissions.

■ Energy Conservation Activities

Tottori Plant

The Tottori Plant is striving to visualize energy to accelerate its energy conservation activities. Conventionally, a person in charge of the infrastructure department verified energy consumption, which only accounted for large segments of energy consumption data and left detailed device data unknown. This initiative innovated methods to collect data and enabled the last three years of data to be visualized by day, month and year. Manufacturing sites will use the data obtained to examine energy consumption with more interest than ever before to find hints in energy use the data obtained to examine energy consumption visualized by day, month and year. Manufacturing sites will use the data obtained to examine energy consumption with more interest than ever before to find hints in energy consumption, which only accounted for large segments of energy consumption data. Previously, the control of chillers always operated at 100% output causing wasteful power consumption when chillers were not running or running at low load because there was no interlink with the work load. The addition of inverter-type control of chillers allows the refrigeration to run while adapting to the work load, which reduces the power consumption.

■ Energy Data Ingestion and Visualization

Energy Conservation Activities

Power Usage Breakdown

- Offices, etc. 4.0%
- Gas Processing 4.0%
- Water Processing 6.0%
- Indirect 5.0%
- Air-condition Electricity 11%
- Plastic 6.0%
- Condenser 13%
- Nitrogen Device 7.0%
- Production 59%

Content of Improvement

Before Improvement

- Output: 50%–60%

After Improvement

- Output: 20%–40%

Efforts for Reducing Indirect Risks from Wastes

To verify proper disposal of waste, JDI uses a check sheet that specifies legal requirements and our voluntary standards to conduct regular on-site checks of business partners (collection and transport operators, intermediate treatment operators, and users) to make judgments on the continuation of contracts. However, we had to revert back to traditional methods because of the declaration of a state of emergency due to the FY2020 COVID-19 pandemic.

Changes to Observation Points

① Check the state of industrial waste via the web
② Utilize data from W.M.F. Industrial waste website
③ Prepare and execute measure to prevent the spread of the virus when conducting on-site inspections

In FY2020, JDI verifies the proper disposal of industrial waste by gathering information without relying only on conventional confirmation methods through the above changes.

PCB waste treatment

Businesses that store Polychlorinated biphenyls (PCBs) must report on the storage status and dispose of the waste by the mandated date in accordance with the Act on Special Measures concerning Promotion of Proper Treatment of PCB Wastes. The Mobara Plant has been disposing of PCB waste by category in stages up until now but plans to make the final dispose of small-sized waste materials which have a high PCB concentration by the mandated date in March 2023.
Environmental Initiatives

Management of Chemical Substances/Environmental Load

At JDI, we perform chemical substance management by broadly classifying these into the chemical substances used in our manufacturing processes, as well as the chemical substances contained in our products. We are also engaged in environmental improvement activities with an understanding about the environmental load caused by chemical substances.

Our global manufacturing subsidiaries also perform similar operations.

Management of Chemical Substances Contained in Products

JDI has established the Green Procurement Guideline based on laws and regulations, including the RoHS Directive, ELV Directive, and REACH regulations, and requests from our customers.

With the understanding and cooperation of our suppliers, we manage chemical substances contained in procured items such as parts and materials. JDI takes into consideration the risks of chemical transfer to products from materials which come in direct contact with our products during manufacturing, defines systems to manage those risks, and verifies no restricted substances are used.

Before shipping them for our customers, we examine chemical substances contained in our products.

Management of Chemical Substances

In regards, to chemical substance management, JDI complies with laws and regulations, conducts green procurement, collects data on chemical substances and measures chemical substances.

Compliance with laws and regulations

JDI complies with laws and regulations concerning chemical substances used and contained in the products. The major laws and regulations concerning chemical substances include the Act on the Evaluation of Chemical Substances and Regulation of Their Manufacture, etc., Act on Confirmation, etc. of Release Amounts of Specific Chemical Substances in the Environment and Promotion of Improvements to the Management Thereof, RoHS Directive, ELV Directive, and REACH Regulations.

Green procurement

JDI has established the Green Procurement Guideline based on laws, regulations, and requests from our customers, and promotes green procurement. We provide the Green Procurement Guideline to our suppliers and other stakeholders. And we disclose the Green Procurement Guideline on our website.

Collection data on chemical substances

Cooperating with our suppliers, JDI collects data on the chemical substances used and contained in the parts and materials composing the products. We monitor the use of chemical substances in accordance with laws, regulations, and requests from our customers.

Measurement of chemical substances

JDI regularly measures the chemical substances contained in its atmospheric emissions and wastewater discharged. We sample the products and measures the chemical substances contained in them.

JDI monitors the use of the chemical substances and promote the reduction of discharged amounts of the chemical substances to respect for biological diversity and to contribute to conservation of the environment and a sustainable society.

Ecosystem Conservation Activities

Japanese elm and cherry trees distinct to the local area grow in SG20-no-Mori on the grounds of the Ishikawa Plant for all to enjoy the changing seasons throughout the year. Some of the trees which have been growing for more than 15 years have tree trunks multiplied in size. We also plant new trees in an effort to transition from a group of trees to a sustainable forest. JDI has set up nesting boxes around its plants as well, which will attract many different birds and contribute to the conservation of biodiversity. “Hotaru-gawa” Creek and “Koi-carp” Pond are two artificial bodies of water created on the grounds of the Mobara Plant. Fireflies live around Hotaru-gawa Creek, and flights by dozens of fireflies can be seen in late May of every year. Dozens of golden carp can be seen swimming elegantly in the “Koi-carp” Pond.

We will continue to engage in environmental conservation activities from neighborhood cleanup to water quality management in order to maintain the ecosystem now and into the future.

Environmental Load

Our business activities consist of inputting energy and resources for product production, which are accompanied by outputs such as CO2, wastes, and so on.

An overview of this is shown in the figure below (covering all domestic plants + global manufacturing subsidiaries in FY2020). The basis of our environmental improvement activities lies in reducing the amount of inputs and outputs, and we work to address such activities by determining each of these items for every area in a detailed manner.

</table>

1. The priority controlled chemical substances refer to 38 substances selected as being subject to priority control efforts.
2. Among substance covered by the Act on Promotion of Global Warming Countermeasures, the term “greenhouse gas” is used to refer to the seven substances: PFC (CF4, C2F6, C3F8, CO2, CHF3, C2H2F4, C2F5). Emission factors of AR4 are used.
3. At the time of publishing this report, the expression “greenhouse gases” is used to refer to these seven substances: PFC (CF4, C2F6, C3F8, CO2, CHF3, C2H2F4, C2F5) and N2O. Emission factors of AR4 are used.
4. Within Japan, this refers only to emissions of the 38 priority controlled chemical substances designated by JDI, and global refers only to emissions of VOC.
Global Subsidiary Initiatives

Initiatives at Global Manufacturing Subsidiaries

We have two global manufacturing subsidiaries which mainly assemble LCD modules and produce liquid crystal parts. Each company has acquired the ISO 14001 certification and promotes ongoing improvements from environmental perspectives. The environmental impact of these operations is mainly the electricity and water used for production and the waste byproduct.

Example of Environmental Initiatives

Reduction of CO₂ Emissions

NXP switched its power supply to an energy retailer that uses water power plants as an energy source in 2017, dramatically reducing CO₂ emissions. The emission coefficient for this energy retailer is 0.0000003 t-CO₂/kWh.

Maximizing Energy Efficiency

The project driving the environmental group at this plant is gradually transitioning to LED lighting, setting efficient temperatures for air conditioners, managing compressed air leaks, and switching off devices when in low demand. Announcements on energy-saving reforms also aim to transform the office culture.

Nanox Philippines Inc. (NXP) Initiatives

Improving the Recycling Rate

The collection rate of rare metals and other such materials from sorting of waste from reject panels which began in 2019 is approximately 20% each year. This has also been adopted to recycle paper and packaging materials as well as reclaim valuables from waste.

Other Initiatives

NXP handles chemical substances by limiting its use to only specific processes to reduce the volume of use as well as help save water in kitchens and comfortable rooms. We were unable to engage in environmental and social activities outside of the plant due to the pandemic.

As one environmental activity inside of the plant, NXP conducted greennovation program in November 2020 and held a Christmas decoration contest using recycled materials in December 2020.

Third-party Opinion

The following is a third-party opinion regarding Japan Display Group’s CSR Report 2021 (hereinafter “Report”). I have verified the clear progress JDI has made in its initiatives toward realizing a sustainable society.

1. Securing employee health and new work styles

Many companies have reaffirmed the importance of securing employee health and safety due to the spread of the COVID-19 in terms of business continuity. The Report provides comprehensive information on occupational employee health and safety, management, and new work style initiatives.

2. Realizing a decarbonized society

In light of Japan’s 2050 Carbon Neutrality Declaration, the CEO has committed to reduce greenhouse gases (GHG) as one of JDI’s major challenges in its medium- to long-term plan. JDI has started calculating greenhouse gas emissions (Scope 3) this fiscal year throughout the entire supply chain in accordance with all of the survey items in the CDP company questionnaire, which is a survey JDI has been conducting for some time. JDI is continuing to strive in water security initiatives as well.

3. Toward the next fiscal year

I hope JDI will push forward into more advanced stages of its initiatives in the next fiscal year driven by its progress thus far.

4. Establishing a relationship between a personal tech company and sustainability

JDI has announced itself as a new personal tech company (see footnote on page 4). I had an impression that JDI can position its personal tech company initiative as an important strategic element to realize a sustainable society and to achieve the SDGs. JDI should consider first clarifying the relationship between its personal tech company initiative and sustainability, and then explain its concrete strategies and initiatives to stakeholders in an easy-to-understand manner.

5. Identifying material sustainability issues and disclosing targets, indicators and corporate data

The Report would also benefit from identifying environmental and social issues JDI considers vital (material) to disclose information centered upon targets, indicators and company data. Some potential environmental and social issues which could be considered material include environmental issues such as medium- to long-term targets for the reduction of greenhouse gases, as well as social issues such as occupational employee health and safety (e.g.: occupational accident index), health management (e.g.: employee health checkup rate), and work style reform measures. If it is difficult to disclose such data in the Report due to space constraints, JDI could even provide a separate data sheet or post the information on its homepage.

6. Advancing value chain initiatives

I think JDI should also disclose more information about its value chain by expanding the information to include not only environmental risks but also human rights and other social risks beyond conflict minerals, such as human right issues. I would also like to ask JDI to link its value chain initiatives with its Business Continuity Plan (BCP) which prepares the company for the pandemic and more frequent natural and other disasters.
