Since the actual quantities discharged into soil and disposed in landfill for the concerned sites were zero, these were not recorded.

3. Environmental Accounting

Summary of Environmental Conservation Costs in Japan

Major category	Items	Details								Investment	Expenses	Units: 1 million yen
		To air	To public water bodies	Sewer	Off-site	To air	To public water bodies	Sewer	Off-site			
Environmental conservation costs *9 (cost within business area)	Pollution prevention cost	Costs for preventing air pollution, water pollution, soil pollution, noise, foul odors, and more								0	3,381	
	Global environmental conservation cost	Costs for preventing global warming, conserving energy, preventing the depletion of the ozone layer, and more								11	273	
	Resource recycling costs	Costs for the efficient utilization of resources, as well as the recycling, treatment and disposal of industrial waste and general waste								0	1,533	
	Total									11	3,177	

*9 Analysis and measurement costs related to the environment are also included in the costs within business areas.

Summary of Environmental Conservation Effects in Japan

Major categories	Categories	Items		Effect	Units
		Emissions of energy-derived CO ₂	Emissions of waste, etc.		
Environmental conservation effects (physical unit)	Environmental conservation effects related to environmental burdens and waste *10	89	million t-CO ₂	19	1 million yen
	Operating revenue related to environmental burdens and waste	6,451	t		

*10 In order to consider the changes in the production output, values were derived using the following formula, which was established by referring to the Environmental Accounting Guideline.
Effects = emissions from the previous fiscal year x (glass substrate area from the fiscal year in question / glass substrate area from the previous fiscal year) - emissions from the fiscal year in question
